EDUCATION

Rowan University

Master of science (Data Science)

National Institute of Technology | GPA: 3.28

Bachelor of Technology (Computer Science and Engineering)

Relevant Coursework: Artificial intelligence, Neural Network, Computer Vision, Cloud Computing, Operation Research and Optimization, Big Data.

New Jersey, USA

Jan 2024 - ongoing

Srinagar, India

Aug 2017 - Jul 2021

TECHNICAL SKILLS

Research Domain: Data Science, Machine Learning, Deep Learning, Natural Language Processing, Image Processing and computer vision, Data Mining

Languages: Python, Matlab, R, Java.

Web Technologies: HTML, CSS, JavaScript, Spring boot

Libraries: Numpy, Pandas, Matplotlib, Seaborn, Sklearn, NLTK, Tensorflow, BeautifulSoup, Geopandas, Keras, Tweepy, Imblearn, Scipy, Statsmodels, XGBoost, PySpark, Pytorch

Tools and Frameworks: AWS, Boomi, Android Studio, GitHub, MySQL, PostgreSQL, Excel, Plotly

EXPERIENCE

Deloitte USI | Business Analyst (Cloud Engineering) | Hyderabad, India

Sept 2021 - Nov 2023

- **Client 2 : 10x Genomics, Inc. | Pleasanton, California, U.S**

Role and responsibility:

- Implemented multiple data pipelines between system like Oracle, Workday, Salesforce, Bynder, Siesmic, Service-now, Stripe, Airtable, Ziflow etc.
- Proactively participating in hyper care activities during go live, code testing, validating the code quality, performing Unit & SIT testing, taking care of test/Prod cutover activities, working on defect/Hot fixes, raising defects to the respective team, coordinating with the co-functional teams, preparing technical design documents, Boomi work procedure documents, deployment checklist and various other necessary reports
- Took part in data migration /data sync activities with connectors like Database (DNN), Salesforce, SAP DW, Coabis, kony, MDM, Zuora etc. and integration support
- Worked closely with third party vendor to make the bank integration smoother for the client which involves the process of collecting payment details deposited by the customers against the generated invoice. Integration includes REST APIs using JSON Web Token (JWT) Authentication Method.

- **Client 1: Gilead Sciences, Inc. | Foster City, California, United States**

Role and responsibility:

- Designed and developed exposed REST API endpoints which were consumed by the IVR Services of a Health Care provider firm. This included designing APIs, JSON structures and swagger docs.
- Collaborated with client's business analysts, developers, and quality analysts to analyze, report, and document issues to help improve the performance and stability of the Application.
- Supported creation of documentation on Process description and Technical design of the Application.

Advance Telecom and Data Networking | Intern | Ghaziabad, Delhi.

Role and responsibility:

- Worked on different wireless technology
- Took part in client discussions and requirement gathering.
- Supported to analyze and resolve issues and bugs.

ACADEMIC PROJECTS

Batukh - Complete Python Package to Digitize Documents. | Tesnsorflow, Pytorch, CRNN, RESNET50, Upscaler

- Implemented a complete python package to digitize old historical documents using deep learning. The key features include page extraction (loss = 0.44), layout extraction (loss = 0.47) , baseline detection (0.55) , optical character recognition (average levenshtein distance per length of sequence = 0.32), visualization via tensorboard and documentation

Time Series Analysis | ARIMA, Box-Jenkins Model Selection, Python

- This is a brief study of time series analysis, extracting meaningful statistics from data and forecasting time series using ARIMA model.

Stock Analysis | Python

- This is a brief study of stock market data, extracting and visualizing data to get meaningful insights and forecasting. The keep features include portfolio optimization, capital assets pricing model, OHLC visualization, predictive models using ARIMA, SVR, ANN and LSTM.

Linear Optimization | Python

- Brief study on linear optimization using Gurobipy and numpy. The main topics included are simplex algorithm and duality theorem.

Model to generate 2d designs for a rollercoaster | Python

- Implemented an evolutionary model using ANN from scratch to generate creative 2D rollercoaster designs to maximize fun while keeping in consideration that the designs are physically possible as per our understanding of physics.

LEADERSHIP & INVOLVEMENT

- Co-Founder of Technical Club WeByte | National Institute of technology Srinagar
- Coordinator of Techfest Techvaganza | National Institute of technology Srinagar
